

Exercise 6 – Brain.js

Work in groups of 2-3.

With ML libraries, JavaScript developers can add Artificial Intelligence to web applications.

One fairly simple library is Brain.js, which will use in this exercise.

Look into the code, the script part, in the file BrainHighWins.html

- a) What does the neural net seem to calculate?
- b) Apparently, it is here hoped that the neural net can mimic a relatively simple function?
Try with misc. values, and see if neural net has actually learned this function?
